

Discovery atlas (GSE211785)

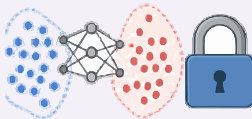

16 control · 13 HKD · 7 DKD donors

Technically robust single-nucleus contrasts

iPT expansion common to DKD and HKD

DKD-associated state

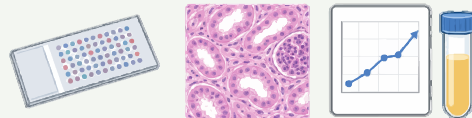

scDisInFact + donor pseudobulk

DKD vs HKD within iPT

12 marker genes

Independent patients and tissue

Present in KPMP

KPMP snRNA (40 DKD, 16 HKD)

79% of genes same direction

Accompanies albuminuria

Confined to injured cells

Tissue and histology

reflect common injury

State resolved in iPT cells
